OVERHEAD CEILING OSCILLATING FAN

The OOF is a rotating and oscillating high velocity axial fan designed to keep dust & fiber from accumulating on light fixtures, ceilings, overhead structures, ducting and equipment. The OOS is direct ceiling installed and can cover up to 4,000 Ft² (370 M²). The polyurethane fan blade non-spark construction gives safe high flow performance. The rotation and the oscillation are adjustable for maximum results.

The OOF Fan combined with the Ibis Central Vacuum System (CVS) may assist your maintenance and safety departments in addressing the latest OSHA, NFPA, CE and ATEX directives for controlling combustible dust.
