FILTER ENCLOSURE LIGHTING OPTIONS

The Ibis Process Air Filter Enclosures can be supplied with two options of lighting. Well designed lighting of the interior of the filter allows visual inspection of the filter condition without stopping the process to enter the enclosure. Improved lighting is also useful for filter maintenance.

The traditional light fixtures supplied are used inside the enclosure and include a vapor tight industrial fixture with a glass globe and gasket complete with a fluorescent bulb. The fluorescent bulb has less heat than an incandescent bulb and is much more vibration resistant.

The Ibis G-3 concept filters are now supplied with a special exterior mounted LED light fixture in either 120 volt or 240 volt. The LED design gives better lighting and places any electrical connection outside of the air stream.
