Ibis International, Inc. has developed a line of *Sound Barrier* acoustical enclosures for the hygienic product, nonwoven and related industries. This design significantly reduces the noise generated by hammermills, pumps, fans, turbines and other mechanical equipment. The unique design utilizes a formed metal grid type frame and four inch (100 millimeter) thick acoustical panels. Each panel can be removed independently from other panels and the frame. This provides for easy installation, location of doors/window/ports, relocation, modification, additions, etc. (contact Ibis, Inc. for additional information)
